Solution to Problem 1.14. (a) Each possible outcome has probability $1/36$. There are 6 possible outcomes that are doubles, so the probability of doubles is $6/36 = 1/6$. (b) The conditioning event (sum is 4 or less) consists of the 6 outcomes $(1;1);(1;2);(1;3);(2;1);(2;2);(3;1)$; 2 of which are doubles, so the conditional probability of doubles is $2/6 = 1/3$.
